Experienced data analyst, focused on data with a spatial aspects, seeking employment in a forward-moving company with a high performance level. Resourceful and self-motivated scientist able to handle data from a wide diversity of sources/formats. 10+ years experience with the R statistical computing language. Creative, disciplined, and thriving in team collaborations.

Personal details

Date of birth **16 September 1979**

Nationality **American**

Languages **English (native), Dutch (intermediate)**

Professional experience

2009 – **Postdoctoral Fellow, Data Scientist, Data Manager, Macquarie University, Sydney, Australia**

- Present
- Analyse large amounts of data and present results in verbal, written and visual forms.
 - Effectively determine methods to combine data from many sources and in different formats.
 - Create and implement interactive tools to effectively communicate and visualize large amounts of data in ways that are usable to the stakeholders.
 - Liaise with key stakeholders to optimize project's outputs to and ensure these are most beneficial to the client.
 - Develop, organize and teach spatial data analysis and visualization (R and ArcGIS).
 - Utilize high performance computing (HPC) to transform data sets to uniform formatting to increase data access, usability and discover-ability.
 - Establish, develop and promote data management systems.

2008 **Spatial analyst, Texas Technological University, U.S.A. (based in Australia)**

- Predictive modelling of habitat quality for fish populations.

2005–2008 **Spatial analyst, Finnish Forest Research Institute (METLA), Helsinki, Finland**

- Integration of forest growth data and sawmill locations to assess, visualize and summarize habitat quality and sawmill viability.
- Prepare project proposals and reports for funding and governmental agencies.
- Participant, and assisted in coordinating EU wide project to harmonize forest carbon storage reporting methods.

Education

2014–2017 **PhD - submitted, expected graduation Jan 2018, Macquarie University, Australia, Spatial and temporal variation in avian breeding phenology and traits**

2005–2007 **MSc, University of Helsinki, Finland, Forest Sciences and Business**

2001–2004 **BSc, University of Idaho, U.S.A, Ecology and Conservation Biology**

Personal ambitions

Work in team with mutual support and fine atmosphere, Contribute to and over see projects geared at long-termed sustainability, Personal development and continued learning, Work-life-balance

Skills

data analysis, spatial analysis, large data sets, statistical modelling, machine learning, data visualization, project management communication

Software

R (excellent), ArcGIS, git, shiny, Python
